## A leading security solution for Microsoft SharePoint Server 2013

Keeps SharePoint clean by scanning files within the SharePoint database. Provides full-fledged server protection. Prevents malicious threats and unauthorised users breaching system security.

---

<b>Antivirus and Antispyware</b>	Eliminates all types of threats including viruses, rootkits, worms and spyware Provides real-time on-access scanning of the server-stored data Provides all the tools for full-fledged server protection, including the resident shield and on-demand scanner Perform scans on-demand or schedule scans of any content stored within the SharePoint database structure ESET Self-defense prevents malware and unauthorised users from disabling the security of the system Powered by the advanced ThreatSense® technology combining speed, accuracy and minimal system impact
<b>Rule-based Filtering</b>	Apply rules to fine-tune the protection Setup rules upon file name, size and real file type
<b>Low System Demands</b>	Delivers proven protection while leaving more system resources for the server's vital tasks
<b>Smooth Operation</b>	Password protected uninstallation Automatically excludes critical server files Automatically recognises server software such as Microsoft SQL Server and Microsoft IIS Automatically detects server roles to exclude critical server files like data stores and paging files from on-access scanning to decrease overhead
<b>ESET SysInspector</b>	Performs in-depth system analysis to identify potential security risks
<b>ESET SysRescue</b>	Allows you to create an automatically bootable OS image with installed security solution to clean deeply nested malware and restore system operations
